

AMIT BAJAJ

---

It is difficult to introduce yourself because you know yourself so well that you do not know where exactly to start from.

I never thought I will end up being a mathematics teacher! I was very passionate about music. I once loved playing tabla and hence, I always wanted to pursue my career in music. But after having so many wonderful years with math's. I must confess today that I was somehow destined to be a math's teacher by profession and a math's lover at heart.

Presently, I am working as the Head of Mathematics department in CRPF Public School, Rohini. I am teaching and learning mathematics for the past ten years. My objective is to bring my enthusiasm and interactive teaching style to my math classroom. I am in a full-time teaching position focused on making mathematics understandable, applicable, and enjoyable to the students.

Mathematics has been my passion ever since I started appreciating its beauty. I love solving challenging mathematical problems and puzzles. One can find a large number of mathematics non-syllabus books by Indian and foreign authors in my bookshelf. I love to read whenever I have some leisure time in hands. Also, I have written Mathematics practice books for classes IX and X.

I am techno savvy and enjoy working on computer and internet. I maintain my own blog “ [www.amitbajajmaths.blogspot.com](http://www.amitbajajmaths.blogspot.com) “ as well as my school's blog “ [www.crpfpsrohini.blogspot.com](http://www.crpfpsrohini.blogspot.com) “ with a team of students with a motto “Sharing is caring”. I tried and hence brought technology to my classroom. Without any infrastructural help, I managed to bring my students to the realm of E-education. All the question papers, ideal answer sheets, extra assignments and other mathematical tools are posted on my blog on a daily basis and students have been coming up with various other ways of e-learning!

I enjoy teaching in school as I always get a chance to feel young and energetic with the kids. I like to keep myself updated with the latest trends and information in mathematics teaching and emerging technology.

I modestly admit that I love to work. It's like what someone said filling up "interstices ", i.e. the free spaces in time. Sometimes, I do get overburdened with work and assignments but then I'm a happy workaholic!

For me, in each task that must be done, there is opportunity. I see the task not as a burden, but as an encouragement to be fully alive and effective. In my opinion, Education is a life-long learning process and I believe there is no age bar to learn new things. There is stagnation when one stops learning; this thought always makes me work harder with sincerity and dedication.

Presently, my pay cheque may not be as much as many of my friends, but I have the most important thing – self satisfaction. I am shaping small children's life, character and future. And when some students visit back and talk of their success and tell about the high profile jobs, I consider myself blessed and feel proud.

Vertical growth gives new dimensions and vision to move ahead. And so I dream to be at a position from where I can materialize my views and ideas of a futuristic school. Experience teaches us to grow, to modify and to build. I dream of a school with a difference. A school where each and every domain of learning is appreciated, where curriculum reflects the need of the students, where teacher is an innovator with a belief in child centered learning , where each teacher nurtures a deep love for life. I want my students to build a career than look for a job. I see all my students constantly inventing and discovering things at each step of their learning.

Its lack of faith that makes people afraid of meeting challenges, and I believed in myself.
