

CLASS XII DIFFERENTIAL EQUATIONS CHAPTER 9

EX. 9.1 SOLUTIONS

Question 1:

Determine order and degree(if defined) of differential equation $\frac{d^4y}{dx^4} + \sin(y''') = 0$

ANS :

$$\begin{aligned}\frac{d^4y}{dx^4} + \sin(y''') &= 0 \\ \Rightarrow y'''' + \sin(y''') &= 0\end{aligned}$$

The highest order derivative present in the differential equation is y'''' . Therefore, its order is four.

The given differential equation is not a polynomial equation in its derivatives. Hence, its degree is not defined.

Question 2:

Determine order and degree(if defined) of differential equation $y' + 5y = 0$

ANS :

The given differential equation is:

$$y' + 5y = 0$$

The highest order derivative present in the differential equation is y' . Therefore, its order is one.

It is a polynomial equation in y' . The highest power raised to y' is 1. Hence, its degree is one.

Question 3:

Determine order and degree(if defined) of differential equation $\left(\frac{ds}{dt}\right)^4 + 3s\frac{d^2s}{dt^2} = 0$

ANS :

$$\left(\frac{ds}{dt}\right)^4 + 3\frac{d^2s}{dt^2} = 0$$

The highest order derivative present in the given differential equation is $\frac{d^2s}{dt^2}$. Therefore, its order is two.

It is a polynomial equation in $\frac{d^2s}{dt^2}$ and $\frac{ds}{dt}$. The power raised to $\frac{d^2s}{dt^2}$ is 1.

Hence, its degree is one.

Question 4:

Determine order and degree(if defined) of differential equation $\left(\frac{d^2y}{dx^2}\right)^2 + \cos\left(\frac{dy}{dx}\right) = 0$

ANS :

$$\left(\frac{d^2y}{dx^2}\right)^2 + \cos\left(\frac{dy}{dx}\right) = 0$$

The highest order derivative present in the given differential equation is $\frac{d^2y}{dx^2}$. Therefore, its order is 2.

The given differential equation is not a polynomial equation in its derivatives. Hence, its degree is not defined.

Question 5:

Determine order and degree(if defined) of differential equation $\frac{d^2y}{dx^2} = \cos 3x + \sin 3x$

ANS :

$$\frac{d^2y}{dx^2} = \cos 3x + \sin 3x$$

$$\Rightarrow \frac{d^2y}{dx^2} - \cos 3x - \sin 3x = 0$$

The highest order derivative present in the differential equation is $\frac{d^2y}{dx^2}$. Therefore, its order is two.

It is a polynomial equation in $\frac{d^2y}{dx^2}$ and the power raised to $\frac{d^2y}{dx^2}$ is 1.

Hence, its degree is one.

Question 6:

Determine order and degree(if defined) of differential equation $(y''')^2 + (y'')^3 + (y')^4 + y^5 = 0$

ANS :

$$(y''')^2 + (y'')^3 + (y') + y^5 = 0$$

The highest order derivative present in the differential equation is y''' . Therefore, its order is three.

The given differential equation is a polynomial equation in y''' , y'' , and y' .

The highest power raised to y''' is 2. Hence, its degree is 2.

Question 7:

Determine order and degree(if defined) of differential equation $y''' + 2y'' + y' = 0$

ANS :

$$y''' + 2y'' + y' = 0$$

The highest order derivative present in the differential equation is y''' . Therefore, its order is three.

It is a polynomial equation in y''' , y'' and y' . The highest power raised to y''' is 1. Hence, its degree is 1.

Question 8:

Determine order and degree(if defined) of differential equation $y' + y = e^x$

ANS :

$$y' + y = e^x \\ \Rightarrow y' + y - e^x = 0$$

The highest order derivative present in the differential equation is y' . Therefore, its order is one.

The given differential equation is a polynomial equation in y' and the highest power raised to y' is one. Hence, its degree is one.

Question 9:

Determine order and degree(if defined) of differential equation $y'' + (y')^2 + 2y = 0$

ANS :

$$y'' + (y')^2 + 2y = 0$$

The highest order derivative present in the differential equation is y'' . Therefore, its order is two.

The given differential equation is a polynomial equation in y'' and y' and the highest power raised to y'' is one.

Hence, its degree is one.

Question 10:

Determine order and degree(if defined) of differential equation $y'' + 2y' + \sin y = 0$

ANS :

$$y'' + 2y' + \sin y = 0$$

The highest order derivative present in the differential equation is y'' . Therefore, its order is two.

This is a polynomial equation in y'' and y' and the highest power raised to y'' is one. Hence, its degree is one.

Question 11:

The degree of the differential equation

$$\left(\frac{d^2y}{dx^2}\right)^3 + \left(\frac{dy}{dx}\right)^2 + \sin\left(\frac{dy}{dx}\right) + 1 = 0 \text{ is}$$

(A) 3 (B) 2 (C) 1 (D) not defined

ANS :

$$\left(\frac{d^2y}{dx^2}\right)^3 + \left(\frac{dy}{dx}\right)^2 + \sin\left(\frac{dy}{dx}\right) + 1 = 0$$

The given differential equation is not a polynomial equation in its derivatives. Therefore, its degree is not defined.

Hence, the correct answer is D.

Question 12:

The order of the differential equation

$$2x^2 \frac{d^2y}{dx^2} - 3 \frac{dy}{dx} + y = 0 \text{ is}$$

(A) 2 (B) 1 (C) 0 (D) not defined

ANS :

The highest order derivative present in the given differential equation is $\frac{d^2y}{dx^2}$. Therefore, its order is two.

Hence, the correct answer is A.
